

# Would you have changed the management of this patient's course to death?

Free Seminar, 11 August 2016  
Launceston General Hospital, Tasmania

## Free Workshop

**Aim:** A free event jointly presented by the Tasmanian Audit of Surgical Mortality and the Victorian Audit of Surgical Mortality. The audit process is designed to highlight system and process errors in the management of surgical patients. A component of the audit process is the peer review of clinical events that led to the death of a patient. All reviews are carried out in a spirit of empathic enquiry, intended to be educational rather than a punitive exercise.

**CME/CPD:** Approved by the Royal Australasian College of Surgeons. 1 point per hour, maximum 2 points in category 4.

**Registrants:** May include Fellows, IMGs, Medical students, Anaesthetists, nurses, researchers, clinical governance stakeholders, quality assurance associates, Gynaecologists and clinicians.

**Registrations open until 9 August 2017**, please register through following the link: <https://www.eventbrite.com.au/e/tasm-and-vasm-seminar-would-you-have-changed-the-management-of-this-patients-course-to-death-registration-26071943886>
