5.1	I have gained valuable knowledge and skills from this program.	38	100%	4.3
5.2	I can apply the skills and knowledge from this program in my role.	38	100%	4.3

Unexpected Death – What Now?

Thursday, 12 July 2018, 4.00pm to 6.00pm

Written Comments

1. *What causes the ischaemic bowel to result in death? The surgery?*
- Limited discussion regarding deteriorating patient, clinical care provided by nursing & medical staff. When considering reporting death to coroner.
- Interesting to hear medical views regarding when to report to coroner, and factors they consider.'
2. *Informative session. Valuable updates. Enjoyed the discussions, differences in views and respect shown to everyone. Maybe have more than one sign in sheet to lessen the wait time for better flow and start time, although the start was delayed due to technical issues. Therefore not a real problem for anyone still signing in. Thank you for an enjoyable free seminar.*
3. *Thank you. Is there something that can be done to support the families waiting for confirmation about loved ones' death? The time frame for feedback is far too long for closure and clarification.*
